1 Introduction

1.1 Overview

This document outlines new features, bug fixes and known issues associated with **RapidSE Desktop ESP v1.4.5**.

2 Bugs Fixed

2.1 Checksum Calculation with Signed Payload

In previous versions, values in the payload corresponding to signed integers were being treated as such during checksum calculation, as opposed to being treated as raw bytes, as expected by the **RapidSE ESP**. This resulted in incorrect checksums for frames containing fields with a negative value, thus prompting the **RapidSE ESP** to reject these frames. This issue has been rectified for this release.

3 Known Issues

There are no outstanding known issues associated with this release.
